 DAVANTIS + *immix*

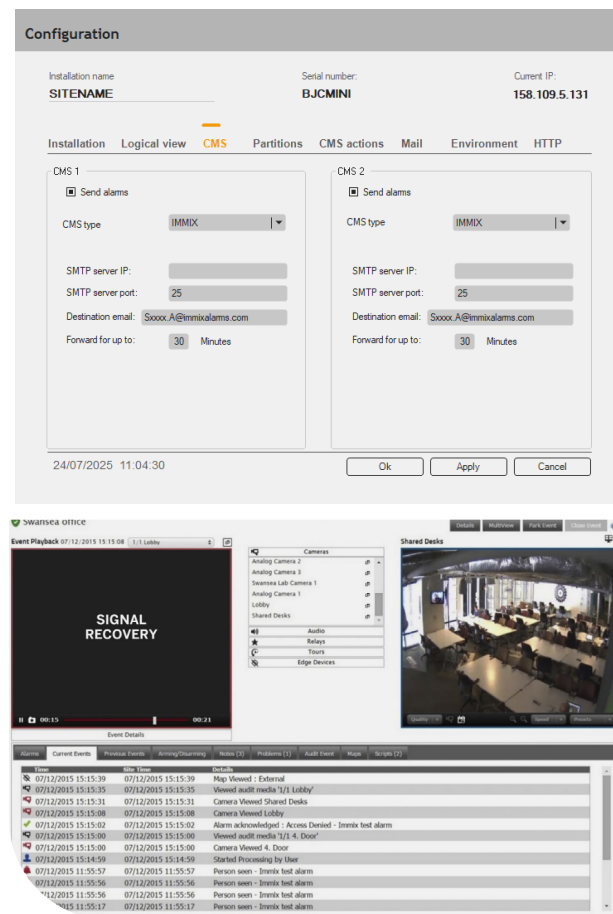

Immix integration / Improved Functionality

Simplified configuration:

Configuration has been simplified and streamlined to the essentials, all settings are now on a single page

Enhanced technical alarms:

'Signal Loss' and 'Signal Recovery' alarms now include a descriptive alarm clip.

Updated Remote Access Features

TeamViewer updated to the latest version.

Improved access to remote configuration settings.

Bugs fixed

Available for all units

ONVIF —

External trigger alarms not working on Provision cameras.

Immix Configuration —

Fixed unhandled exception caused by setting very long numbers or decimals as the send retry time.

Security —

Platform protected from unauthorized access to static files.

Platform —

Daview AMS “Add Video” feature not working on secondary machines.

Daview AMS “Add Video” option does not appear after releasing the secondary machine.

Remote Support —

TeamViewer is hidden behind the “Support” pop-up after restarting the process.

Connection details may not display the first time the button is clicked.

Email Sending —

The process is now protected from rebooting during recovery attempts when the destination server is consistently down.
